

HOME STANDBY GENERATORS

PEACE OF MIND FOR
YOUR HOME AND FAMILY.

Power outages are unpredictable.
A home standby generator automatically
keeps your essential systems running so
you can stay comfortable, safe and connected.

YOUR GUIDE TO BUYING A HOME STANDBY GENERATOR

1

CONTACT A QUALIFIED ELECTRICIAN

Your electrician will evaluate your home, determine the proper generator and transfer switch size, assess fuel requirements (natural gas or propane), and provide an installation proposal.

2

REVIEW YOUR OPTIONS

Work with your electrician to determine your power needs, fuel source, preferred location and any permitting requirements. They will help you choose the right system for your home.

3

ORDER ALL EQUIPMENT FROM SAN LUIS POWERHOUSE

Once you and your electrician have selected the system, you will order all required equipment through San Luis Powerhouse. **A 50% equipment deposit is required to place the order.** We will coordinate delivery of the generator and all components.

4

INSTALLATION, STARTUP & ONGOING SERVICE

Your electrician handles installation. After installation is complete, San Luis Powerhouse performs the manufacturer's required startup to activate your warranty. We also offer ongoing maintenance and repair services to keep your system running reliably for years to come.

RECOMMENDED ELECTRICIANS

GOWDY ELECTRIC

Lic. #769016

(805) 927-2630

GLEN ROBINSON ELECTRIC

Lic. #800715

(805) 937-7966

These are independent electrical contractors familiar with generator installations. You are welcome to use another licensed electrician of your choice.
